

GOLDEN VALE LEDGE STONE WALL CLADDING

**HIGHLAND
FIRES & BBQs**

Granite is a dense, coarse grained rock which consists of minerals including quartz, feldspar and mica combined with molten magma which solidifies when cooled and held under extreme pressure for millions of years.

Highland Fires ‘Golden Vale’ Ledge Wall Cladding replicates the traditional stacked stone. Characterised by a blend of warm creams and browns with glistening quartz flecks.

This cladding is artisanally crafted with tumbled and rocky edges to create a rugged, organic and textural feel.

NOTE: Shade/batch variation is an inherent characteristic of all natural products. The colour of the material supplied may vary to samples/images provided.
